## Initializing Rutoken authentication dongle

*Please note that all the contents of Rutoken device will be permanently erased during the initialization.*

*All the contents of Rutoken ECP 2.0 Flash data card will be erased during the initialization if user PIN has been blocked before.*

*Rutoken Disk software will be completely disabled after the initialization.*

*To restore Rutoken Disk software after the initialization please follow the manual.*

*It's impossible to reinitialize blocked Rutoken device of earlier versions (marked as 0B0Z or 0D3Z on the device enclosure), you need to purchase a new one.*

Please follow the manual to install or update Rutoken drivers.

Click **Rutoken Control Panel** icon on Windows desktop or type **Rutoken Control Panel** in Windows search panel to start it.

When **Rutoken Control Panel** is opened select **Administration** tab. Then click the **Login** button in upper right corner.

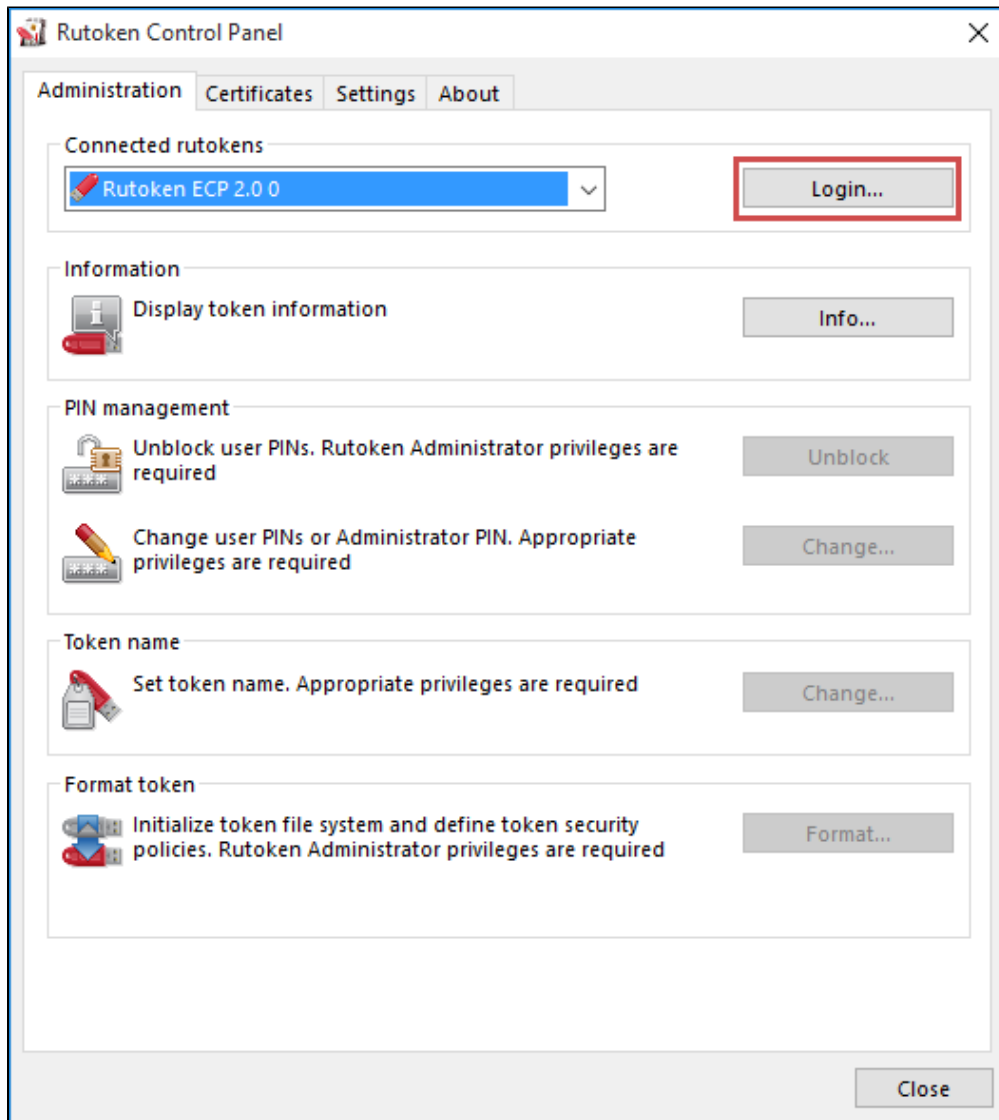

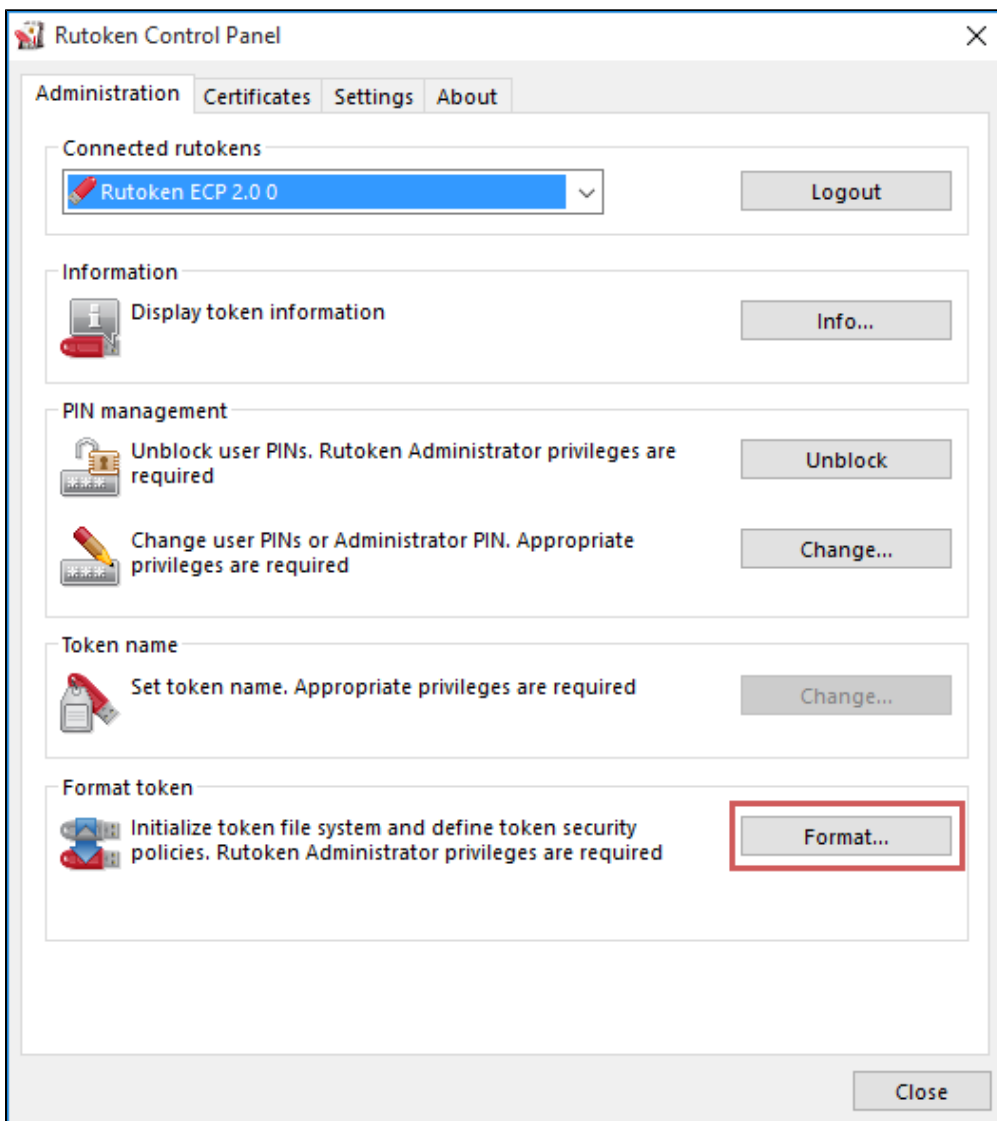

logon dialog choose the proper Rutoken device by selecting it in the dropdown box and tap **Administrator** radio button. Then enter Admin PIN and press **OK**.

The default Admin PIN is **87654321**.
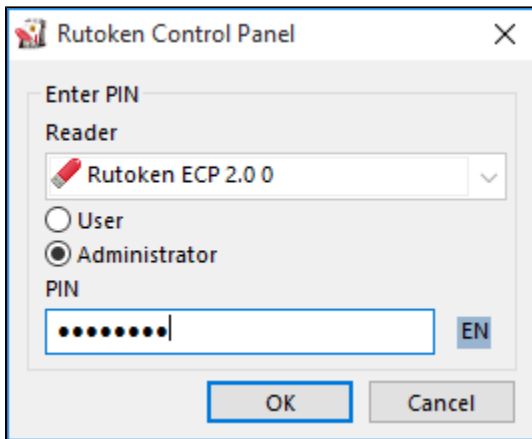

If Admin PIN is lost, you need to block Rutoken device by entering invalid PIN value so many times as required. The invalid PIN length should be greater than 6.

After **Format…** button is enabled click it to open **Format token** dialog box.

In this dialog you may set the new values of token name, User and Admin PIN's and permit the account keepers to change user PIN.

Now click the **Start button** to process the initialization of Rutoken device. Click **Yes** to skip the warning dialog on **No** to prevent the operation.

Do not disconnect the Rutoken device or turn off the computer before the initialization is complete.
